

AUTOMOBILES  
**CITROËN**

**AFTER-SALES TECHNICAL DIVISION**

As from 5th January 1972 SM vehicles for U.S.A and CANADA have seat belts fitted with a warning device.

**A - OPERATION.**

The warning device, consisting of an alarm and a flasher " FASTEN SEAT BELTS " ( see Fig. below ), works when the following three conditions are fulfilled :

- Ignition on
- Handbrake released
- Seat belt unfastened

**1st case : Vehicle with driver and no passenger.**

To shut off the device when the handbrake is released and the ignition is on the driver has to fasten his seat belt.

**2nd case : Vehicle with driver and passenger in front.**

When the ignition is on, the handbrake released and the driver's seat belt fastened, the passenger, by sitting in the front seat, sets off the flasher and the alarm by means of a trigger mechanism under the seat.

To shut off the device, the passenger has to fasten his seat belt.

Alarm and flasher « FASTEN SEAT BELTS »

De-froster control D.E.F.
